What is Amazon Customer Care Center (AC3)?

AC3 (Amazon Customer Care Centre, formerly known as Aviary) is Amazon's foundation technology for CSAs that handle Customer Service (**CS**) interactions with customers. It includes core capabilities (used by all teams) as well as a federated ownership model for

the development, testing, deployment, and maintenance of experiences and features that are specific to use-cases for different types of CSAs handling different types of customer contacts and other transactional workloads for customer service.

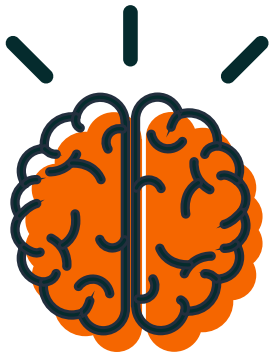

[AC3 Wiki](#)

[Release Dashboard](#)

[AC3 Caboodle](#)

The Customer Engagement Technologies (CET) team has built a redesigned contact handling framework for use by CSAs to deliver world-class customer service from day one.

CET Customer
Engagement
Technologies

Reduce the cognitive load facing CSAs today (i.e: opening multiple windows and tabs to answer a simple query)

Improving the time for CSAs to become proficient in contact handling.

CSAs have an opportunity to use more structured workflow methods, enhancing both employee & customer experience.

Video introduction for Amazon Customer Care System, AC3, our new customer service application.
Learn how it aligns with our LPs and increases our ability to delight the customer.

An introduction to the AC3 customer service application, as provided by our Amazon Customer Service Associates.

AC3 Work flow videos created by
CTAP Team

The AC3 Did You know series provides monthly videos that create awareness and drive knowledge.

AC3 Program Tenets

- We will emerge from this program with a transformed, **working contact-handling experience**. In the face of the ticking clock, we may need to suspend the regular order of business. There are **no exceptions to missing the timeline**.
- We prioritize **customer trust** over customer convenience but abhor any added friction for customers. If forced to choose between a CX improvement and a critical breach of customer trust, we will choose **customer trust**. If forced to choose between missing the 30 Jun 2023 deadline and a critical breach of customer trust, we will choose **customer trust**.
- If we must choose between CX improvements and reducing migration risk, we will **reduce migration risk over raising the bar on CX**. While doing so, at a minimum, we will not create a worse experience than what exists today.
- We will not use the timeline as an excuse not to innovate and improve on the customer or CSA experience. If the old CX risks customer trust or the cost to improve takes minimal to no additional engineering effort, **we will make it better**.
- We will **timely escalate** when the timeline or a critical work-track is at risk. We will use **high-velocity decision making to provide path to green** for owning teams

Journey So Far

Consumer Customer Service Support (C2S2) has partnered with **Customer Engagement Technologies (CET)**, **UK CS Operations**, **Associate Technology & Innovation (ATI)** Learning, **Amazon Customer Excellence System (ACES)** to launch **AC3 incubation team** in October 2021.

This was the second AC3 CS team launched after US store. Incubation Team (5 HC) based out of HYD continues to identify defects and escalating systematic issues/feature launches

to the CET Team. The Incubation Team handles a contact to the best of their capability via AC3. However, if unable to then switches to CSC. A total of **17551** Journals have been raised this year. Since launch day **92** (removing duplicate TTs/issues) unique issues have been raised by UK Operations. Out of which **32** issues have been resolved and implemented successfully, **36** cases have been resolved as part of Future roadmap & **24** issues are still work-in-progress as tech team continues to work on the fix.

Post the launch of incubators in Oct 2021, 10 CSAs worked on the “Go Live” project which enabled the Senior Leadership to make decision on whether AC3 is scalable or not. In the incubation phase, the primary metrics is the contact resolve rate recorded within AC3 application compared to CSC toggle percentage. In other words, how many contacts are resolved within AC3 and how many have been resolved in CSC by toggling in. Incubators will have both AC3 and CSC access at the same time.

With positive results in most of the metrics the toll gate review led to the ramp of 200 CSAs across the network with 120 from CS India and 80 from Go sites during WK7.

The expansion also brought in more use cases to be handled with the team which wasn't initially anticipated and handled by the 10 CSAs. Cases like GC, Prime subscription, Return & Refund to name a few were the use cases that got added initially causing negative impact of 46bps on Network RAP during the first week and later increased the variance to -8.64% and -2.92% in February & March respectively.

The Operations Manager from HYD leading this project created a core team along with QA and Partner sites who worked dedicatedly to stabilize the performance from W9-W14 thus improving it by **924bps** in Phones and MessageUs by **525bps**. This was done through involving QA, setting up Team Manager Audit Analysis, involving Training interventions and strong practice on BQ Management. The tool with its limitations during the 1st phase of the launch also added to the overall quality and productivity impact. to assist customers initially. However, the tool development has come a long way, is user friendly and many workflows have been created since its inception.

The dial up now is **100%** and the hoop of Caracara is 7:30AM BST to 12AM BST and contacts outside this window or spill over reach CSC users who handle under the forecast group Caracara but resolve in CSC. Currently there are **7 sites** operational in handling AC3 contacts with the latest entrant being VCS-ZAF during WK 48 (45HC) and AMM site with an upcoming launch during WK1 (40HC). Current HC mentioned below.

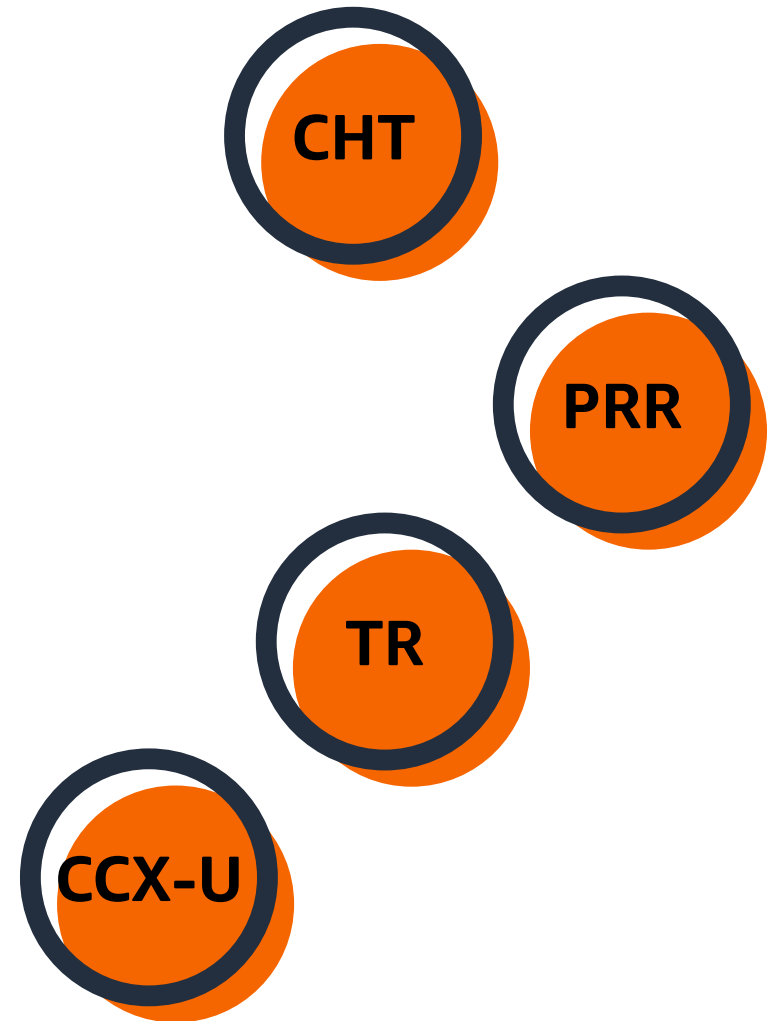

AC3 Metrics

PRR, CCX-U, Transfer Rate and **CHT** are the primary metrics to ensure we are providing quality service to our customers as quickly as possible.

RAP isn't considered as CSAs cannot tag a contact to an Order ID and hence unable to see contacts coming within 48hrs. Additionally the sites are also monitored closely on Response Rate & Park Rate.

AC3 started showing improvements in the Quality Metrics from March, 2022 achieving **86.78%** PRR to **92.76%** PRR in December, 2022 (**598bps**).

Requisites for AC3 Launch

- **Request Access:**

Once the associates have completed the KNET and are ready to work on AC3. Access needs to be requested for the associates. Without this, the associates won't be able to access the tool. Sample SIM

- **KNET to complete for new hires:**

a) WWCS: AC3 Migration Curriculum (2 hours, 10 minutes)

b) Contact Channel Training – MessageUs (2 hours, 5 minutes)

Requisites for AC3 Launch

If AC3 app shows disabled, here's the steps:

1. Launch the chrome browser.
2. Navigate to **<https://prod.AC3.cs.amazon.dev>**
3. You will see a message pop up that says you are not allowed to access the app in browser mode. Click on the three dots icon in the top right.
4. A drop down menu will appear.
5. Click '**More Tools**' and then click '**Create Shortcut...**'
6. A popup will appear. Check the '**Open as window**' option (very important!) and then click **Create**
7. The app will be installed to your device and will be automatically launched.

- **Quality Learning Curve** - Quality Metrics improvement still continues to be a part of the learning curve for the CSAs and Team Managers. While there has been considerable progress across the non-controllable (tool issue / tool failure / lack of features) by working closely with the Tech Team focus of the Operations Team still remains on improving the Controllable Aspects (CSA communication Skill / process related errors made by CSA). It is advised to ensure that the team audits a minimum of 60 contacts for PRR (minimum of 5 for each BQs) and 20 for Transfers. A SharePoint is recommended to keep a regular tracking of these audits on a weekly level. Also sites should co-ordinate with the ACES and QA Team to gather best practices, insights and opportunity for them to reflect and work upon in their respective sites. Currently there is a WBR in place which is sent across to all AC3 sites and Cadence Call to discuss upon the actionable.
 - **Team Manager Handling AC3 contacts before the launch/Side by Side Sessions** – It is recommended for the Team Managers to handle a few contacts in AC3, or have a few SBS Sessions to understand the functionality of the tool.
 - **Concessions** – Associates and Team Managers are requested to abide by the concession workflow of the tool. Though the Team Managers might have CSC Access, we recommend not processing concessions using it. That way one would understand the impact of the tool, and identify challenges.
 - **BQ Management** – BQ Management is recommended a daily basis to meet the monthly goals. It is advised to identify BQs within the first 2 weeks, and work with them closely. Helping them with glide goals and daily audits of their contacts is recommended.
 - **Outage Time and Contact Disconnect** – Outage Time and Disconnects are to be monitored closely. The primary aim would be to resolve incoming contacts. Reducing any unplanned AUX usage would have a positive impact on performance.
- 

All about AC3 – Tools & Features

AC3 is based on three fundamental elements:

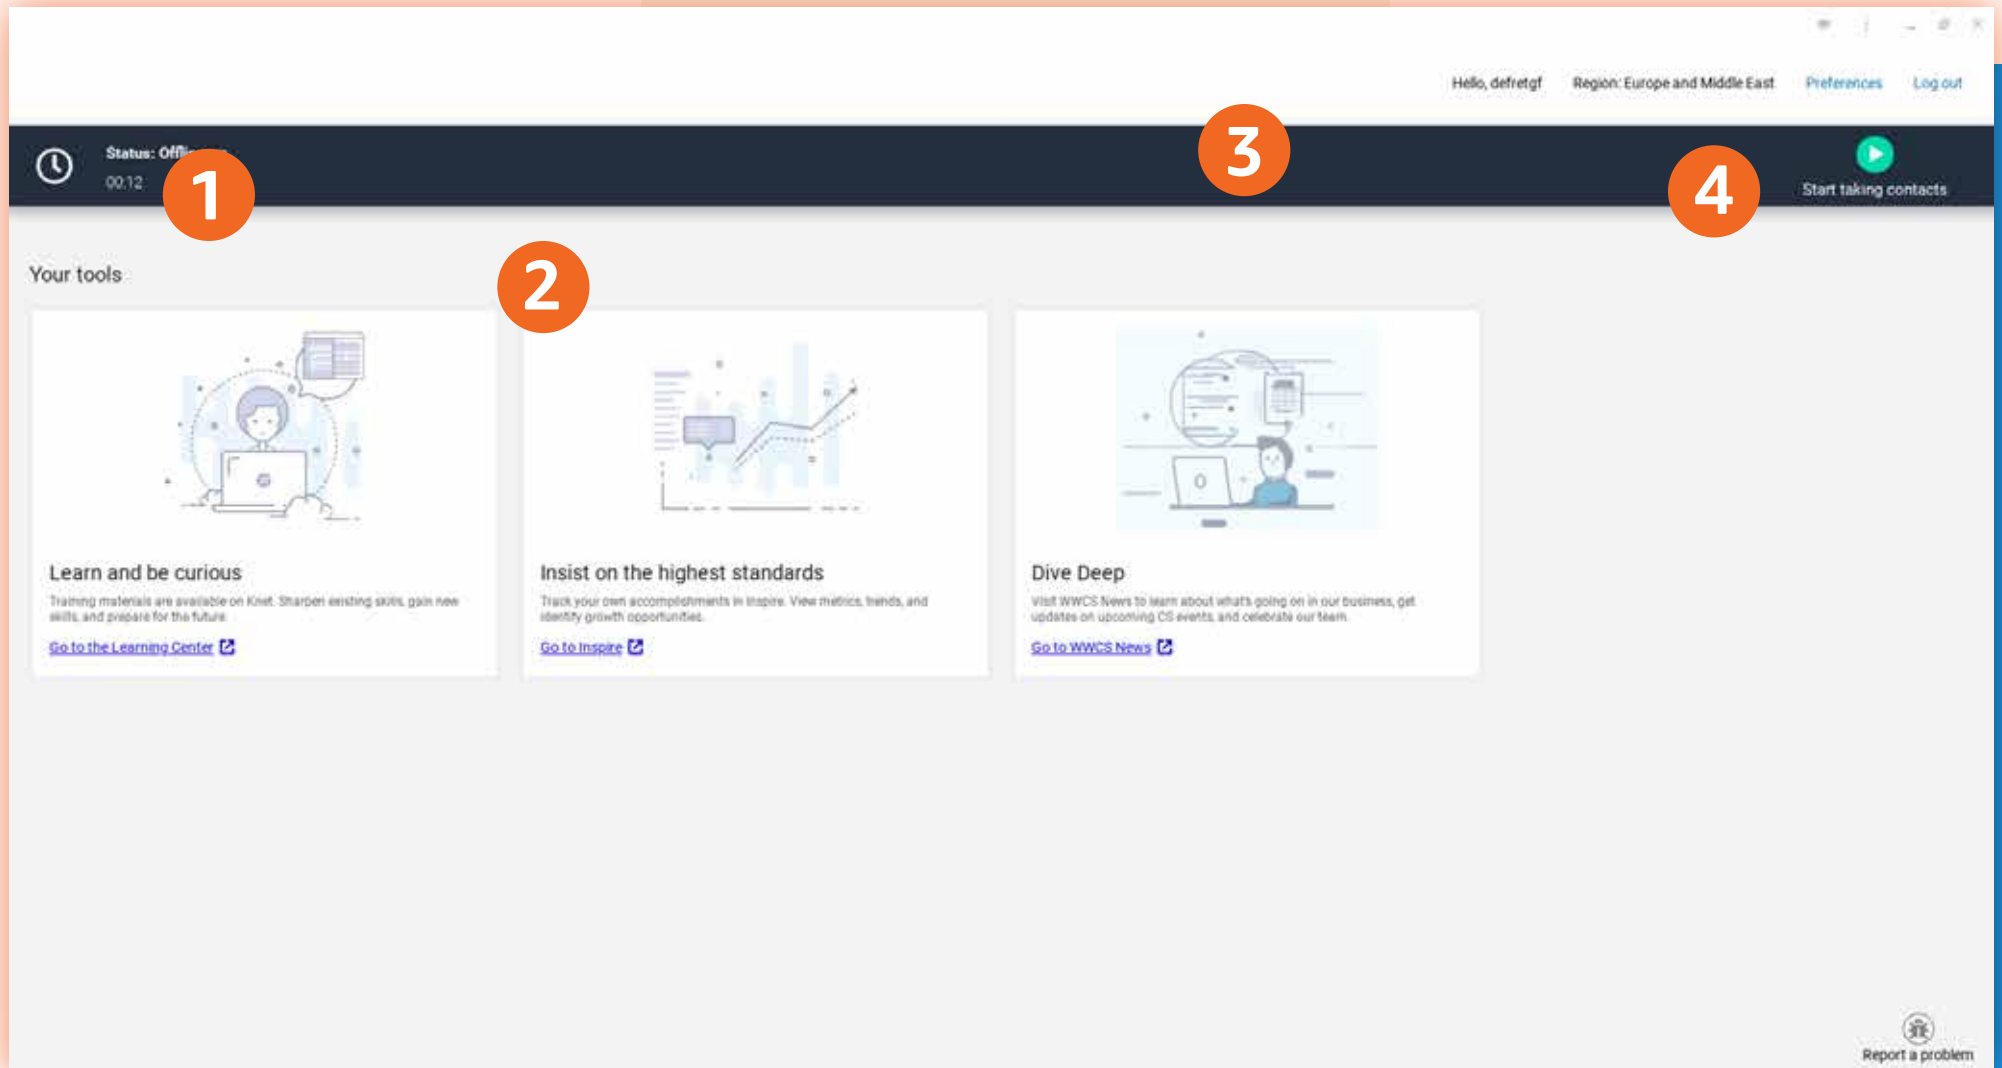

Listen: Always listen and understand the customer issue. Acknowledge the customer problem.

Match: Once a CSA receives a contact and gains access to the customer's account, they see several match cards on the account which predict what the customer is calling for. Match cards can surface different types of information such as a subscription, an order, or a gift card. Selecting a match card will take you to the Solve Card.

Solve: Solve Card provides information about the specific match card one selects; it will also display the available actions one can take related to match card.

AC3 Homepage

Below is the snapshot of how the AC3 Homepage looks with **1** which signifies the AUX state dropdowns, **2** showing Store selections, **3** states that one is ready to take contacts and **4** showing **KNET**, Performance portal etc.

Match Card

As soon as one gets into the customer account, AC3 will show up several Match Cards on the account, which predict what the customer is calling for. Clicking on any of the below will take you to Solve card.

Contact Summary:

During the initial phase AC3 simplified contact wrap-up by automatically using system generated SIC codes and annotations while wrapping up the contact. However, September onwards with introduction of new features, AC3 now provides option to write email/ suppress HMD and wrap up with SICs similar to CSC. The contact summary page looks like this as shown below:

The screenshot displays the 'Contact Summary' page within a web application. At the top, a navigation bar includes a green checkmark icon labeled 'Done' and a 'Resources' icon. Below this, a breadcrumb trail shows 'Contact Landing Page' and 'Contact Summary'. The main content area is titled 'Contact Summary' in orange. It features a grey box with the text 'Contact issue: Order gerelateerd > Waar zijn mijn spullen? > Bestelling niet leverbaar > Zending verloren'. Below this, a section for 'Related orders:' lists an order with ID '403-1685176-1266712' and details about 'H'ana Pure Rozemarijnolie'. There is an unchecked checkbox for 'E-mail' and a link for 'Actions taken'. A blue information icon indicates 'E-mail will not be sent. HMD will be sent.' At the bottom, there are two buttons: 'Finish contact' (yellow) and 'Preview' (white).

Finish contact Preview

CS Assistant

Another feature launch which is still in Incubation phase is CS Assistant launched on Oct'22. It is a simple content viewing experience for CSAs to view (aka, **KC-like**) content enabled by keyword search. The MLP is built to enable access to CS Assistant as an independent Web application outside of AC3 behind Global Identity. Building the CS Assistant MLP as a Web application eliminates the burden of a CSOS device to access CS content for valid business and content teams who do not have CSOS devices (including CSA teams like Social Media CS) while also enabling access to CSA populations supporting all four CS verticals.

CS Assistant

1. **Access CS Assistant** as an application outside of AC3 or CSC, and access CS content even when not connected to a contact.
2. Search for content using **keyword search**.
3. When a search is completed in CS Assistant a CSA can see a list of search results related to the query and **find the content that most closely matches the customer problem**.
4. When a CSA successfully completes a search in CS Assistant, a CSA can use a search result to navigate to a piece of long-form content in the CS Assistant app, so they can consume all the relevant content from the query.

Match Finder:

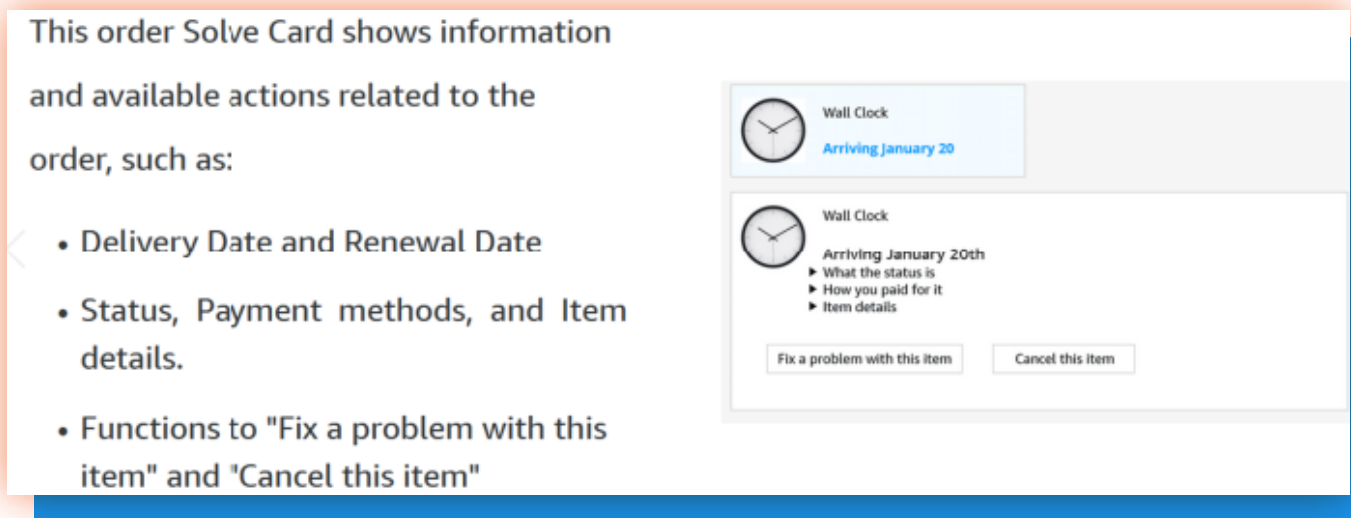

If customer has a separate issue which does not show up in the first list of match card, one will have a Match Finder. The Match Finder looks like this:

The Match Finder interface is a light gray rectangular box with a blue border on the right and bottom. In the top left corner, there is a blue link labeled "Close". Below it, the text "What's the issue related to?" is displayed. Underneath this text, there are five rounded rectangular buttons arranged horizontally, each with a thin gray border. The buttons are labeled: "An item or order", "A payment or charge", "A subscription", "A gift card", and "An account".

Solve card:

Solve Cards provide information about the specific match card one can select:

The Solve Card interface is a white rectangular box with a blue border on the right and bottom. On the left side, there is a heading "This order Solve Card shows information and available actions related to the order, such as:" followed by a list of three items, each preceded by a blue dot. The list items are: "Delivery Date and Renewal Date", "Status, Payment methods, and Item details.", and "Functions to 'Fix a problem with this item' and 'Cancel this item'". To the right of the list, there is a preview of the Solve Card. The preview shows two identical cards stacked vertically. Each card has a clock icon on the left, followed by the text "Wall Clock" and "Arriving January 20" in blue. Below this, there is a section titled "Arriving January 20th" with three bullet points: "What the status is", "How you paid for it", and "Item details". At the bottom of each card, there are two buttons: "Fix a problem with this item" and "Cancel this item".

Transfer destinations:

Below is the window showing different transfer destinations available within AC3 application.

On-going Issues

- **Customer details not loading in AC3 led to multiple transfers:** Go-Live CSAs have reported that customer details are not loading in few cases within the AC3 application. This is also leading to high CHT and often due to lack of details, CSAs are going ahead and transferring the contacts to CSC operators.
- **Pre -order queries with regards to customer cart are being transferred:** AC3 does not have the option to view customer cart for pre order related queries. Hence all queries with regards to pre orders/ delivery charges which cannot be resolved in AC3 are transferred through to CSC .
- **Unavailability of Papyrus/ Live>Non Live transfers:** AC3 does not have direct transfer options from Live to Non live medium. Hence for all these instances Go-Live CSAs transfer the contact to Retail CSC team so that they can transfer the contact to Non-Live queue. These include CAP transfers (concession abuse customers), Buyer-vcac transfers (On hold account) etc.
- **Stop and return/ Reschedule/ Redirection of Shipment:** AC3 does not have options to reschedule / redirect shipments basis customer request. Also, the stop and return feature is currently not in place. So, all these issues are transferred to Retail team who operates in CSC.
- **Usage of Gift cards/ Promotional credit queries:** Often customer contacts to have an understanding of promo credits usage or orders where GC balance/ promo credits have been applied. AC3 currently does not have the feature to understand and dive deep into the transaction details of Orders which lead to transfer through to CSC operators.
- **Order history not available in AC3:** AC3 fails to display orders which are placed more than 3 months from current date. Customers enquiring about old orders are hence transferred through to CSC operators.
- **Refund of Prime (more than one month):** AC3 features does not allow CSAs to process refund for more than one month. Cases where customer is actually eligible for more than one month of refund as benefits are nor used, Go-Live CSAs transfer the contacts to CSC operators.

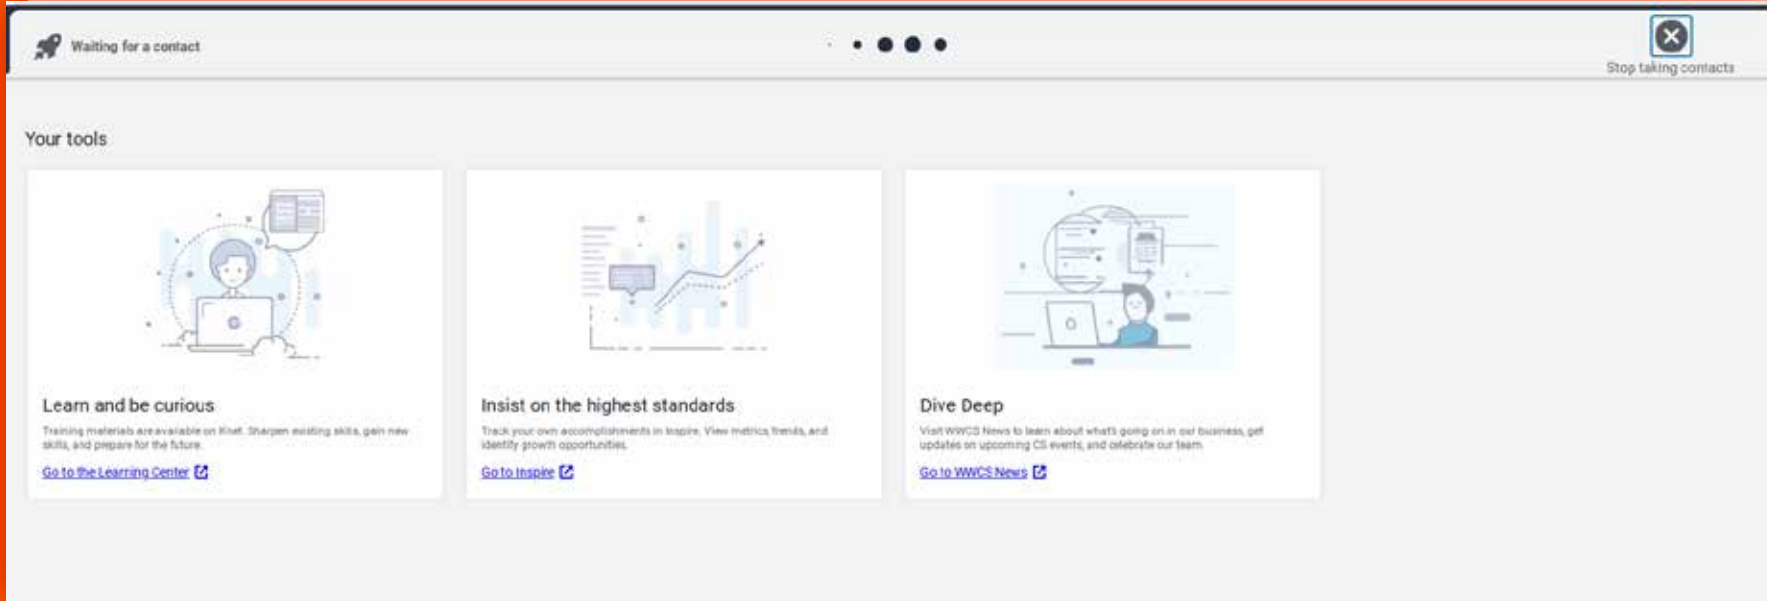

Resolved Issues

- 1. Latency** – It was a challenge since Day 1. However, with new updates and features this is now minimal.
- 2. Retro-charge** – Previously there was no option to issue a refund for retro-charge. However, it is now available for the associates.
- 3. Customer Cart** – Previously the associates didn't have an option to check items in a customer's cart. However, that feature has now been added.
- 4. KC Content was not available** – This has now been resolved with the introduction of CS Assistant.
- 5. Concession Issue** – There was always an issue with concessions, with the toll requesting for transfers when requested for a concession. However, this has also been resolved now.

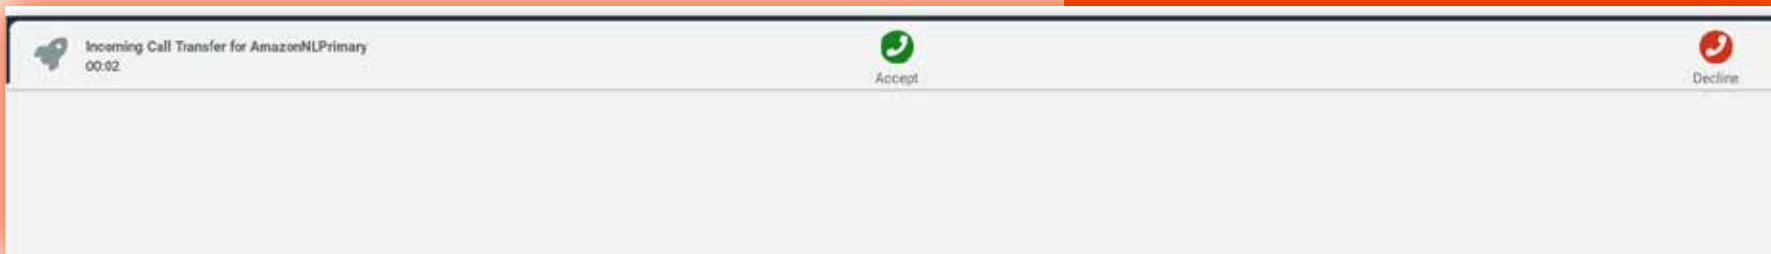

Visual Work Flow of AC3

Snip of AC3 CSA “waiting for a contact”. CSA has to click on “stop taking contacts” before going for break. This would enable the aux options on top left of Home page.

Snip of an **AC3 Incoming Phone contact**:
